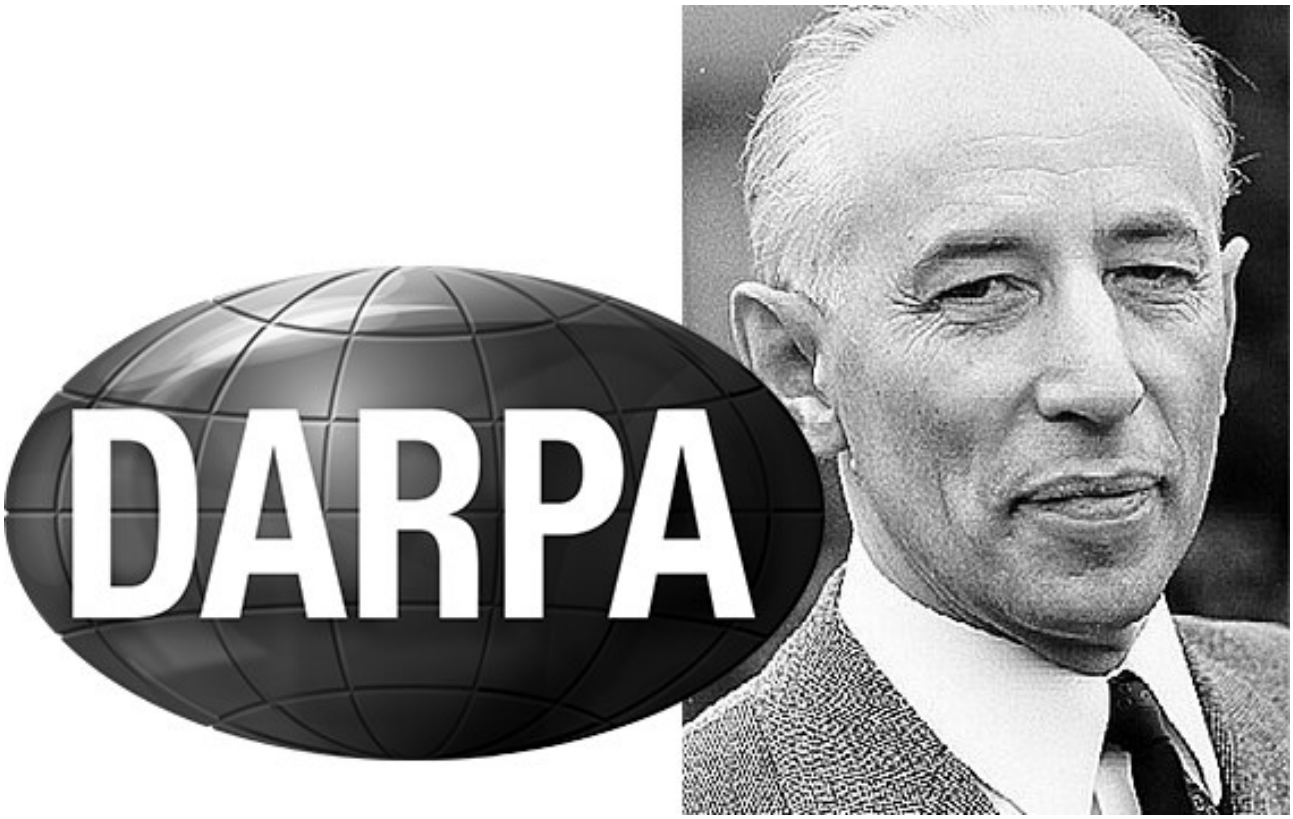
DARPA-‘Covid‘-2020-Truth “We know…” East Berlin’s Stasi on the DARPA-‘Covid’ mount-up as far back as Febuary 1975



In a carefully choreographed 25th birthday present to its inner circle, Ministerium für Staatssicherheit, MfS, the self-defined “working-class brain behind StaSi” authorised the GDR Academy of Science representative Heinrich Scheel to announce on tth Febuary 1975, amiably veiled under a delicately folkloristic smoke-screen of chem-trail content, citing bacteriological instead of virological break-throughs:

“We know about the work financed by the Pentagon on warfare with artificial rain, for example, with psychological weapons, and about the attempts to use bacteriology and genetics for war purposes ...
the various methods of our class adversary to steal and misuse our own scientific results, to make our research dependent on themselves if possible, in order to be able to misdirect, disrupt and sabotage it all the more thoroughly when the time comes.”
(translation of the German original drafted manuscript kept at ABBAW, Berlin Jägerstr. 22 Nachlass H. Scheel Box 217, see below, by Martin Kraemer Liehn)
https://archiv.bbaw.de/nachlaesse/nachlaesse/scheel-heinrich

A shout-out to “The Last American Vagabond” for helping to contextualise the money- and patent-trail for the DARPA-Covid operation back into the 1960s.

The wording in the original:
“Wir wissen um die vom Pentagon finanzierten Arbeiten für eine Kriegsführung mit künstlichem Regen etwa, mit psychischen Kampfstoffen, um die Versuche zur Anwendung der Bakteriologie und Genetik für Kriegszwecke
...
die vielfältigen Methoden des Klassengegners unsere eigenen wissenschaftlichen Ergebnisse zu stehlen und zu mißbrauchebn, unsere Forschung nach Möglichkeit von sich abhängig zu machen, um sie zu gegebener zeit desto gründlicher mißleiten, stören und sabotieren zu können.”
